

What web browser should I be using?

There are several different choices of web browsers on both Microsoft Windows and Apple iOS Devices.

It is entirely up to you, but generally speaking, we recommend using Google Chrome as your default web browser.

Here is some more info about the most popular web browsers:

- Edge is typically the fastest, most reliable and supported web browser we have right now.

- Google Chrome also available on software center.

- Internet Explorer: This browser is no longer supported and deprecated by Microsoft.

- On iOS devices, Edge is still the best option, but Safari may actually be the most widely available on that platform.

Yes, you can use all them!

Normally it is a good idea to have multiple web browsers available on your computer in case you are having an issue printing something or viewing a particular website, you can always try using a different web browser. Sometimes a site will display better in one or the other and websites are constantly changing, so it is always best to check other browsers when you are experiencing issues.

We do NOT support Mozilla Firefox

Please know that we do NOT support Firefox because that web browser often has difficulty authenticating properly to Office 365.
